The Value of an Experienced Training Expert

MathWorks courses are developed by a team of training engineers with exclusive product knowledge gained from working closely with product developers. They acquire significant hands-on experience by using new products months before they are released and are always current on new capabilities.

Learn Relevant Skills

Each course contains a set of learning objectives designed to help participants quickly master necessary skills. Our hands-on approach allows participants to practice, apply, and evaluate their knowledge in the classroom.

Receive Expert Instruction

MathWorks training employs industry-accepted best practices for adult learning and technical instruction, and has developed course content that facilitates a “Presentation, Practice, Test” approach to learning. All training engineers have been selected based on their theoretical knowledge, technical education, experience, and teaching ability, and have been certified as instructors/facilitators by Langevin Learning Services.

Increase Team Success Rates

According to post-training surveys, teams who receive 40 hours of training meet project objectives three times as often as those who receive 30 hours or less. This increase in training time raises the likelihood of meeting objectives by 90%.

“One of the main features I hunt for in the MathWorks training classes is information on best practices. This is what separates the instructor led training from tutorials. This class delivered on that expectation. I’ve already recommended it to colleagues.”

– Prof. Gordon Parker, Michigan Technological University
Get Started on the Right Path

Learning paths represent the suggested sequence of courses based on your particular area of interest. Taking courses in a recommended order can help accelerate your proficiency with MATLAB and Simulink. Learning paths aid in building a proper foundation and help you get the most out of your products.

Prove Your MATLAB Knowledge

MATLAB Certification can help accelerate professional growth and achievement by establishing a standard of excellence that demonstrates MATLAB proficiency to customers, industry peers, and employers. For organizations, certification is a strategic investment that pays off through increased productivity and project success. MATLAB training courses cover all concepts tested in the exam.

Maximize Your Training Budget

Training Credits

Purchasing training credits gives you discounts on future courses. Training credits allow companies to purchase training in volume with a single purchase order - reducing administrative overhead when planning and approving employee training. Training credits can be used in lieu of other payment options for any public, onsite, or online course within one year of purchase.
